

Backup Tape Vaulting

Secure Off-site Data Protection and Quick, Reliable Recovery

Given the vulnerability of data today, it is essential that critical business data be stored securely off the premises.

Iron Mountain's Backup Tape Vaulting service is the proven, reliable solution for protecting your business data and recovering quickly in the event of a disaster. We protect your backup data securely, getting it off-site, offline and out-of-reach. Yet your data is always available the moment you need it, wherever you need it.

Iron Mountain Backup Tape Vaulting offers:

- The most reliable data protection and recovery from the most experienced provider
- 24/7/365 emergency response, providing access to your data whenever and wherever you need it
- Rigorous chain-of-custody and audit trail for clear accountability
- Online tracking, scheduling and reporting via SecureSync™ application
- Assistance developing a data protection and recovery program customized for your business needs
- Consistent vaulting practices across all of your sites to enhance compliance
- The predictable cost of an expertly managed service

THE RESOURCES TO PROTECT YOUR DATA AND DELIVER IT AS NEEDED

Iron Mountain is the leader in off-site data protection and recovery, with more than 15,000 professionals and facilities worldwide, including a fleet of transport vehicles customized to move your data to any location it needs to be. Like clockwork, we synchronize our tape pickup and delivery with your backup schedule. Our goal is to protect your data to help ensure recoverability.

Your backup media is safely vaulted in one of our highly secure facilities that are situated away from areas of potential hazard. Our environmentally controlled vaults provide complete protection from loss, exposure or security threats. Every component of our solution focuses on the elimination of risk to your data.

BEST PRACTICES FOR SECURE HANDLING AND STORAGE

We use proven best practices for security, custody, transport and delivery of your data, ensuring 99.999% service reliability. Our consistent processes and stringent controls for safe, secure handling, restricting data access exclusively to authorized personnel — yours and ours. At key points in transport and handling, tapes are scanned for tracking and document chain-of-custody. While vaulted, tapes are secured by card-key access, video surveillance, and highly trained security personnel.

WE MOVE MOUNTAINS TO RECOVER YOUR DATA

When disaster strikes, our depth and breadth of resources help ensure recoverability. We'll quickly locate the tapes you require, transport them securely to the recovery site of your choice, and if needed, work along side your team to restore your data.

SECURESYNC PROVIDES ENHANCED VISIBILITY AND CONTROL

Iron Mountain’s web-based tape inventory management system, SecureSync, provides your staff with a unified view of backup, vaulting and recovery operations across your organization. The system provides complete visibility and control of backup tapes and allows you to rapidly search your inventory to locate tapes needed for disaster recovery, legal discovery or any other purpose. Authorized users can easily request schedule changes, access reports, track exceptions and communicate with the Iron Mountain team.

PART OF A TOTAL DATA PROTECTION AND RECOVERY SOLUTION

Iron Mountain Backup Tape Vaulting is part of a comprehensive approach to tape backup and disaster recovery for data protection and business continuity. Our services are designed to reduce cost, complexity and risk to your business — while enhancing your compliance and control.

Over the past 50 years, Iron Mountain has grown to be the world leader in records and information management. Today, we count over half of the Fortune 500 among our 45,000+ clients. The reason for the success is simple. Iron Mountain continually earns clients’ trust as their off-site data protection needs grow by investing in technology tools that enhance their access to and control over their critical business information.

Choose Iron Mountain...our policies and procedures for the security and integrity of data management are the most stringent in the industry. We’ve successfully helped customers recover from hundreds of disaster events and completed tens of thousands successful disaster recovery tests.

Iron Mountain...because without the data, there is no recovery.

RELIABLE DATA BACKUP IS MORE ESSENTIAL THAN EVER

Data backup and storage are no longer the straightforward tasks they once were. Recent trends have created new requirements, risks and expectations — requiring you to protect that data to ensure recoverability:

- Explosive data growth increases the need for managed, consistent backup processes
- Identity theft and network intrusions have increased the need for data to be secured during transit and in storage
- Recent large disasters remind us how important it is to protect backup media in order to rapidly recover data to support business continuity
